#### **Definition and Terms**

**Specifications** describe the performance of parameters covered by the product warranty and apply to the full temperature range of 0 to 55 °C, unless otherwise noted.

**95th percentile values** indicate the breadth of the population (approx.  $2 \sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

**Typical values** describe additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

**Nominal values** indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.

The analyzer will meet its specifications when:

- It is within its calibration cycle
- Under auto couple control, except when Auto Sweep Time Rules = Accy
- Signal frequencies < 10 MHz, with DC coupling applied</li>
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on
- The analyzer has been turned on at least 30 minutes with Auto Align set to Normal, or, if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message; if the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user

# Quickly adapt to evolving test requirements

Industries from wireless to satellite communications require wider analysis bandwidth to meet demands for higher data throughput. As higher bandwidth technologies such as 5G NR move into mainstream use, engineers need tools for design validation and manufacturing that offer the accuracy, speed, and bandwidth to accelerate device development. Keysight's new N9021B MXA Signal Analyzer offers best-in-class bandwidth and phase noise for accurate and repeatable signal analysis across millimeter-wave and 5G NR frequencies.

This data sheet is a summary of the specifications and conditions for the N9021B MXA signal analyzer. For the complete specifications guide, visit: <a href="https://www.keysight.com/find/N9021B">www.keysight.com/find/N9021B</a>

#### **EMC**

Complies with the essential requirements of the European EMC Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61326-1
- CISPR 11 Group 1, Class A
- AS/NZS CISPR 11
- ICES/NMB-001

This ISM device complies with Canadian ICES-001

Cet appareil ISM est conforme à la norme NMB-001 du Canada

#### Safety

Complies with European Low Voltage Directive 2014/35/EU

- IEC/EN 61010-1: 2010 AMD1: 2016 / EN61010-1: 2010+A1: 2019; IEC61010-2-030: 2017 / EN 61010-2-030: 2010

#### **Environmental stress**

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be

robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3

### Real-Time Spectrum Analyzer

### Option RT1 and RT2

Real-time analysis				
Real-time analysis bandwidth				
Option RT1	Up to 509.47 MHz	Analysis bandwidth determines the maximum real-tin bandwidth		
Option RT2	Up to 509.47 MHz			
Option DUA	Up to 2 x 255 MHz at same center frequency, requires Option B5X			
Minimum detectable signal duration with > 60 dB		3.33 ns, with option B2X or B5X		
Minimum signal duration with 1	00% POI at full amplitude range	For frequency mask triggering (FMT)		
Option RT1	17.3 µs	Signal is at mask level		
Option RT2	3.57 µs	Signal is at mask level		
Minimum acquisition time	104 µs			
FFT rate	292,969/s
